

**Amendments to the Specification:**

Please replace the paragraph starting on page 3, lines 19 to 25, and continuing on page 4, lines 1 to 12, with the following rewritten paragraph:

---

The present invention also provides a remote control system for remote-controlling a data processing device via the Internet, comprising:

a server having a storage device, for receiving, via the Internet, control data by which the data processing device operates and storing the received control data in the storage device, and for sending the stored control data to the data processing device via the Internet according to a request;

a portable device associated with the data processing device, for registering the control data via the Internet to the server, and then calling the data processing device via a telephone network and designating the data processing device to download the control data from the server; and

the data processing device for:

recognizing whether the current call is issued from the portable device associated with the data processing device by referring to a caller's number communicated when the call is accepted;

sending the server, via the Internet, a request for downloading the control data from the server according to the designation of the portable device if it is recognized that the call issued from the relevant portable device;

receiving the control data downloaded from the server; and  
operating based on the received control data.

---

Please replace the paragraph starting on page 7, lines 22 to 25, and continuing on page 8, lines 1 to 4, with the following rewritten paragraph:

---

The cellular phone 3 has a function of accessing the server 1 of the provider via a communication network (i.e., Internet 5). The user can register the

a 2  
cont

remote control data in the user's own home page by operating the cellular phone 3. Also, due owing to the user's operation, the cellular phone calls to the user's personal computer 1 and commands (or designates) the personal computer to download the remote control data. Here, the calling operation itself may be used as a designation for downloading the remote control data, or data for the designation may be sent after the telephone connection is established.

---

Please replace the paragraph on page 8, lines 5 to 12, with the following rewritten paragraph:

---

a 3

The called personal computer 4 recognizes that the current call is issued from the user's own cellular phone 3, by referring to a caller's number (or ID) which is communicated when the call is accepted. Then, in response to the designation of the user's cellular phone 3, the personal computer 4 sends to the server 1 a request for downloading the remote control data registered on the user's own home page. Additionally, after the personal computer 4 receives the remote control data, downloaded via the Internet 5 from the server 1, the personal computer 1 operates based on the received remote control data.
